

FANUC MT-LINK*i*

Database Schema

NOTE

- 1 This manual describes the operation of WebUI.
- 2 The following table lists the manuals related to MT-LINK*i*. These manuals are bundled into the DVD.
This manual is indicated by an asterisk (*).

Manual Title	Contents	Specification Number	
FANUC MT-LINK<i>i</i>			
Startup MANUAL	This manual describes basic functions and operation procedures.	A-40827 -00001EN	
Install MANUAL	This manual describes how to install, update and uninstall MT-LINK <i>i</i> .	A-40828 -00001EN	
AdminTool OPERATOR'S MANUAL	This manual describes the operation of FANUC MT-LINK <i>i</i> AdminTool (system administration software).	A-40829 -00001EN	
WebUI OPERATOR'S MANUAL	This manual describes the operation of WebUI.	A-40830 -00001EN	
Hardware Key Management Tools OPERATOR'S MANUAL	This manual describes the operation of Hardware Key Management Tools.	A-40871 -00001EN	
Database Schema	This manual describes the data configuration of the database in both MT-LINK <i>i</i> and MT-LINK <i>i</i> Integration Server.	A-40950 -00001EN	*
DBMigrationTool MANUAL	This manual describes how to use FANUC MT-LINK <i>i</i> DBMigrationTool.	A-41012 -00001EN	
Expanding Database Guide	This manual describes how to expand the databases for MT-LINK <i>i</i> and MT-LINK <i>i</i> Integration Server by using external storage.	A-41621 -00001EN	
Custom WebUI MANUAL	This manual describes how to create Custom WebUI.	A-42146 -00066EN	
Troubleshooting MANUAL	This manual describes how to address troubles which have occurred while running MT-LINK <i>i</i> / Integration Server system.	A-42146 -00187EN	
FANUC MT-LINK<i>i</i> Integration Server			
Integration Server Startup MANUAL	This manual describes basic functions and operation procedures of MT-LINK <i>i</i> Integration Server.	A-41086 -00001EN	
Integration Server Install MANUAL	This manual describes how to install, update and uninstall MT-LINK <i>i</i> Integration Server.	A-41087 -00001EN	
Integration Server AdminTool OPERATOR'S MANUAL	This manual describes the operation of FANUC MT-LINK <i>i</i> Integration Server AdminTool (system administration software).	A-41088 -00001EN	
Integration Server WebUI OPERATOR'S MANUAL	This manual describes the operation of Integration Server WebUI.	A-41089 -00001EN

1

OVERVIEW

This document describes the DB configuration of MT-LINK*i*.
MT-LINK*i* deploys MongoDB for DB management.

MongoDB, developed by MongoDB Inc. (formerly 10gen) in 2007, is an open source database management system classified as a document-oriented NoSQL database.

Features of MongoDB:

- Document-oriented database
- JSON data format
- Schema-less
- Index
- Map/Reduce in query syntax
- Replica Set for database replication*
- Sharding for load balancing*
- GridFS for storing more than 16 MB of files
- Capped Collection feature to impose a limit on database usage

* unsupported by MT-LINK*i*

The following table shows key features of MongoDB and RDB (relational database systems):

RDB	MongoDB
database	database
table	collection
record (row)	document
column	field

Following are descriptions of terminology.

Table1. Description of Database Terminology

Term		Description
MT-LINK <i>i</i> DB		The database for MT-LINK <i>i</i>
Integration DB		The database for Integration Server
PK	Primary key	The parent in a parent-child relationship between documents in databases
FK	Foreign key	A child in a parent-child relationship between documents in databases
AK	Alternate key	Not in use
IE	Inversion entry	Not in use
NN	Not null	Required data as documents
Entity		A collection of objects
Capped Collection		Restricting usage of disk storage by specifying the maximum size of a collection. When storing data to exceed the specified size, the collection overwrites the oldest data.

Note that the "o" marks in the following entity tables denote that the items (PK, FK, AK, and NN) are valid.

17	July 28, 2020	uwano	Revised for MT-LINK <i>i</i> version 3.10				Title	FANUC MT-LINK <i>i</i> Database Schema				
16	Jan. 30, 2020	uwano	Revised for MT-LINK <i>i</i> version 3.9									
15	July 22, 2019	uwano	Revised for MT-LINK <i>i</i> version 3.8									
14	Mar. 29, 2019	ogawa	Revised				Draw	A-40950-00001EN				
13	Jan. 29, 2019	ogawa	Revised for MT-LINK <i>i</i> version 3.7									
12	Aug. 01, 2018	ogawa	Revised for MT-LINK <i>i</i> version 3.6									
11	Jan. 12, 2018	ogawa	Revised for MT-LINK <i>i</i> version 3.5				FANUC CORPORATION			Sheet.	5/139	
Ed.	Date	Design	Description									
Date	Dec.25,2015	Desig.	Ogawa	Check		Apprv.	Inoue					

Table2. Description of Data Terminology

Term		Description
L0	Machine	Machine
L1	Equipment	Equipment
Tag	Group	Name for grouped equipment
L1_Pool	Equipment status change point history	Retrieving and storing the logs of the status changes per signal of machines (condition of multiple assign status) that compose the equipment
L1Signal_Pool	Equipment signal change point history	Retrieving and storing the logs of the status changes per signal of machines (simple and multiple assign statuses, excluding condition of multiple assign status) that compose the equipment
updatedate	Date and time	The time value is set in the GMT offset for the time zone specified on Server PC.

Signals from devices (CNC) are assigned to statuses of unit called "equipment" and managed by the unit. The statuses of equipment can be monitored through Web UI screens.

When consisting of more than one device (CNC), equipment can manage the multiple devices collectively. A device (CNC) signal is assigned to a status or more in a unit or units of "equipment".

- Data is stored in the database on the basis of "equipment".
- Note that device (CNC) signals unassigned to any equipment should not be stored in the database.

1.1 VERSION OF SOFTWARE

The software used to prepare this document is listed in the following table.

Table3. List of Software

Software	Version	Overview
MongoDB	Version 3.6.17	Database with WiredTiger engine and "zlib" compression library

Shown below are the versions of MongoDB and MongoDB driver used in MT-LINK*i* / Integration Server.

- C#Driver: Used in .NET Framework applications such as AdminTool and Receiver.
- mongoose: Used in Web display.

Table4. Versions of MongoDB and MongoDB drivers used in MT-LINK*i* / Integration Server

#	Version of MT-LINK <i>i</i>	Version of Integration Server	Version of MongoDB	Version of C#Driver	Version of mongoose	Version of .NET Framework
1	Before 2.1.0	-	3.0.6	2.0.1.27	3.8.31	4.5.2
2	2.1.0	1.0.0	3.2.3	2.2.3.3	3.8.31	4.5.2
3	2.2.0	1.0.0	3.2.3	2.2.3.3	3.8.31	4.5.2
4	3.0.0	1.1.0	3.2.3	2.2.3.3	3.8.31	4.5.2
5	3.1.0	1.2.0	3.2.3	2.3.0.157	4.6.3	4.6.1
6	3.2.0	1.3.0	3.2.3	2.3.0.157	4.6.3	4.6.1
7	3.3.0	1.4.0	3.2.3	2.3.0.157	4.6.3	4.6.1
8	3.4.0	1.5.0	3.2.3	2.3.0.157	4.6.3	4.6.1
9	3.5.0	1.6.0	3.4.9	2.4.4	4.10.8	4.6.1
10	3.6.0	1.7.0	3.4.13	2.5.0	4.13.11	4.6.1
11	3.7.0	1.8.0	3.6.7	2.7.0	5.2.8	4.7.2
12	3.8.0	1.9.0	3.6.11	2.7.3	5.4.19	4.7.2
13	3.9.0	1.10.0	3.6.13	2.7.3	5.4.22	4.7.2
14	3.10.0	1.11.0	3.6.17	2.7.3	5.4.22	4.7.2

17	July 28, 2020	uwano	Revised for MT-LINK <i>i</i> version 3.10	Title	FANUC MT-LINK <i>i</i> Database Schema		
16	Jan. 30, 2020	uwano	Revised for MT-LINK <i>i</i> version 3.9				
15	July 22, 2019	uwano	Revised for MT-LINK <i>i</i> version 3.8

13	Jan. 29, 2019	ogawa	Revised for MT-LINK <i>i</i> version 3.7				
12	Aug. 01, 2018	ogawa	Revised for MT-LINK <i>i</i> version 3.6				
11	Jan. 12, 2018	ogawa	Revised for MT-LINK <i>i</i> version 3.5				
Ed.	Date	Design	Description	FANUC CORPORATION		Sheet.	6/139
Date	Dec.25,2015	Desig.	Ogawa	Check	Apprv.	Inoue	

NOTE

If the driver is an old version, the system may not operate properly depending on the version of MongoDB.

1.2 VERSIONS OF SYSTEMS

The systems used to prepare this document are listed in the following table.

Table5. List of Systems

MT-LINK <i>i</i> System	Version	Overview
Collector	Version 3.10	Collects information from machines.
AdminTool	Version 3.10	Configures the running environment for MT-LINK <i>i</i> .
Receiver	Version 3.10	Stores Collector-collected data in the database.
Web Server	Version 3.10	Displays screens of MT-LINK <i>i</i> .
Exporter	Version 1.11	Collects data from MT-LINK <i>i</i> database and sends to Importer.
Integration Server System	Version	Overview
AdminTool	Version 1.11	Configures the running environment for Integration Server.
Importer	Version 1.11	Receives data collected by Exporter and stores in the Integration Server database.
Web Server	Version 1.11	Displays Integration Server WebUI screens.

COLLECTION OVERVIEW

2.1

SYSTEM CONFIGURATION

- Collector PC: Collects data from machines and sends the data to Receiver.
- AdminTool: Builds product environment for running MT-LINKi and sets up machines and equipment.
- Receiver: Receives the data from Collector PC via network and stores them in the database (DB). (Minimum interval: Receiving and storing occur at 500ms or a longer interval.)
- Web Server: To run Web Server, specify the server URL and open WebUI screens.
- Exporter: Receives data from the MT-LINKi Database Server and sends data to Integration Server.

2.2

LIST OF ENTITIES FOR MT-LINKi DB

Table6. List of Entities for MT-LINKi DB

#	Entity Name	Physical Name	Definition
1	User Setting	User_Setting	Manages information and languages required for signing in, and assigns roles to users.
2	Authority Setting	Auth_Setting	Assigns authorities for functions, layouts and groups to each role.
3	Layout Setting	Layout_Setting	Manages overview layout information.
4	System Setting	System_Setting	Manages system settings.
5	Collector Setting	Collector_Setting	Manages connection and registration information of the Collector.
6	Machine Setting	L0_Setting	Manages protocol, signal and alarm settings.
7	Equipment Setting	L1_Setting	Manages equipment icons and status assignment.
8	Group Setting	Tag_Setting	Manages equipment units and assign of various statuses.
9	Equipment Status Change Point History	L1_Pool	Records the value of condition received. Also, preserves the status when change occurs on the signal. Registers the time when the change ended and the elapsed time.
10	Equipment Status Change Point History (active)	L1_Pool_Opened	Records the value of condition received. Registers the time when the change started.
11	Equipment Signal Change Point History	L1Signal_Pool	Preserves the start time, end time, and the elapsed time when the change occurred for the equipment name, simple/multiple assign status.
12	Equipment Signal Change Point History (active)	L1Signal_Pool_Active	Preserves the start time when the change occurred for the equipment name, simple/multiple assign status.
13	Group Signal Change Point History	Tag_Pool	Preserves the start time, end time, and elapsed time for the group name and status name (In/Out) when the value started to change.
14	Group Signal Change Point History (active)	Tag_Pool_Active	Preserves the start time for the group name and status name (In/Out) when the value started to change.
15	Alarm History	Alarm_History	Manages alarm history information. Keeps the period of occurrence, time and a variety of information. End Time and Time of Occurrence do not exist during alarm condition.
16	Program History	Program_History	Manages program history information. Keeps the period of execution, the execution time and program names. End Time and Execution Time do not exist during program execution. Running program name does not exist when execution is completed.
17	Macro Variable History	MacroVariableHistory	Manages macro variable history information specified to be obtained by the AdminTool machine setting.
18	Production Plans History	ProductPlan_History	Preserves registered production plans on the basis of equipment name, product name, and production period. Also preserves accumulated production plans.
19	Production Results History	ProductResult_History	Preserves histories of production results on the basis of equipment name, product name, product serial number, and production period. Also preserves added values as accumulated product results. Calculates production result from production result (accumulated).
20	Production Results History (active)	ProductResult_History_Active	Preserves histories of production results on the basis of equipment name, product name, product serial number, and production period. Preserves the start time when the value of production result changed.

Ed.	Date	Design	Description					FANUC CORPORATION		Sheet.	10/139
Date	Dec.25,2015	Desig.	Ogawa	Check		Apprv.	Inoue				

#	Entity Name	Physical Name	Definition
21	Work Comments	WorkContents_History	Preserves histories of work comments on the basis of equipment name and period.
22	Operator History	Operator_History	Preserves histories of operator ID on the basis of equipment name and period. Preserves the start time, end time, and period when the operator ID changed.
23	Operator History (active)	Operator_History_Active	Preserves histories of operator ID on the basis of equipment name and period. Preserves the start time when the operator ID changed.
24	Variable History	Variable_History_CNC	Manages variable history information specified for retrieval in AdminTool machine setting.
25	SERVO VIEWER Linkage GridFs File	svFiles.files	Manages the files within GridFs of the files used by SERVO VIEWER linkage.
26	SERVO VIEWER Linkage GridFs Chunk	svFiles.chunks	Manages the chunk of the files expressed by GridFs for the files used by SERVO VIEWER linkage.
27	System Diagnosis	SystemDiagnosis_PC	Manages Receiver/Collector information of system diagnosis.
28	System Diagnosis (Collector)	SystemDiagnosis_Machine	Manages machine information of system diagnosis (Collector).
29	Asset Management Setting	L0Asset_Setting	Manages asset management setting of the machines.
30	Asset Management Online Information	Asset_OnlineInfo	Manages asset management information collected by the Collector and acquired by FOCAS function displayed on the Web screen.
31	Asset Management Online Information Web Name	Asset_OnlineInfoWebName	Manages the Web name of the asset management items displayed on the Web screen.
32	Asset Management Other Systems Linkage	Asset_System_Cooperation	Manages asset management information collected by the Collector and used in linkage with other systems.
33	Servo Axis Configuration Information	AxisConfiguration	Holds servo axis configuration information for machine.
34	LDAP Server Setting	LdapServer_Setting	Holds LDAP Server connection and registration information.

NOTE

The following entities are not used in Version 3.0 or later:
 102 Equipment History (L1_History), 111 Group History (Tag_History),
 110 Equipment Current Data (L1Live), and 111 Group Current Data (Tag_Live)

NOTE

Following are the data types (DataType).

1. In the case of FanucCNC custom signals (PMC)
 - 0: BIT
 - 1: BYTE
 - 2: WORD
 - 3: DWORD
 - 4: REAL (single precision real type)
 - 5: LREAL (double precision real type)
 - 6: Unused
 - 7: Unsigned BYTE
 - 8: Unsigned WORD
 - 9: Unsigned DWORD
2. In the case of FanucCNC custom signals (PcodeVar)
 - 100: Conversation macro
 - 101: Auxiliary macro
 - 102: Execution macro
3. In the case of Robot custom signal
 - 1000: Bool
 - 1001: Int32
4. In the case of MTConnect
 - 1001: Int32
 - 1002: UInt32
 - 1003: String
 - 1004: Double
5. Other than above
 - 1: None

2.2.6.2.2 Outlier Detection Setting

Table50. Outlier Detection Setting

Object Name	Logical Name	Outlier Detection Setting
	Physical Name	Filter_Setting
Definition	Manages outlier detection setting of signals. Setting values for the AdminTool [Outlier Detection Setting] dialog box.	

Table51. Definition of Outlier Detection Setting

#	Attribute (Logical)	Attribute (Physical)	P K	F K	N N	Data Type	Definition	Ver.	Application Access			
									AdminTool	Receiver	Web Server	Exporter
1	Outlier Detection Format Version	dcOverThreaholdFormatVersion			O	Int32	Function version of outlier detection	1.0	R/W			
2	Error Range	error			O	Array	* Unused	1.0	R/W			
3	Warning Range	warnig			O	Array	* Unused	1.0	R/W			
4	Number of Smoothing Data	windowcount			O	Int32	Number of data for smoothing Setting value: 1~100 1: No smoothing	1.0	R/W			
5	Parameter Setting Value	PluginArgs			O	String	Simple Threshold Checker Parameter setting value (NOTE)	1.0	R/W			
6	Format Version	FormatVersion			O	Int32	Version of function	1.0	R/W			
7	Filter Type	FilterKind			O	Int32	Outlier detection type 10001: Simple Threshold Checker	1.0	R/W			
8	Filter Name	PluginName			O	String	Simple Threshold Checker	1.0	R/W			

NOTE

Parameter setting value (PluginArgs) is an array of the following setting values.

Upper limit value of warning range
 Enable/disable upper limit value of warning range
 Lower limit value of warning range
 Enable/disable lower limit value of warning range
 Upper limit value of error range
 Enable/disable upper limit value of error range
 Lower limit value of error range
 Enable/disable lower limit value of error range
 Number of smoothing data

Example: 8.00, False, 1.00, False, 12.00, False, 0.00, False, 1

2.2.11 Equipment Signal Change Point History

Table78. Equipment Signal Change Point History

Entity Name	Logical Name	Equipment Signal Change Point History
	Physical Name	L1Signal_Pool
Definition	- Preserves the start time when the value of simple / multiple assign status started to change and when the change ended and the elapsed time for the equipment. (NOTE 1) - When the state recorded in the Equipment Signal Change Point History (active) (L1Signal_Pool_Opened) changes, the time when the change ended and the elapsed time are registered and recorded. - Records the value of simple/multiple assign status (other than "condition") set on the AdminTool [Equipment Setting] window.	

Table79. Definition of Equipment Signal Change Point History

#	Attribute (Logical)	Attribute (Physical)	P K	F K	N N	Data Type	Definition	Ver.	Application Access			
									AdminTool	Receiver	Web Server	Exporter
1	Equipment Name	L1Name	O		O	String		2.0		R/W	R	
2	Start Time	updatedate	O		O	Date		2.0		R/W	R	
3	End Time	enddate	O			Date		2.0		R/W	R	
4	Time Span	timespan				Double	Unit: Second	2.0		R/W	R	
5	Signal Name	signalname	O			String		3.0		R/W	R	
6	Signal Value	value				variable (NOTE 2)	Value of signal (NOTE 3, 4)	3.0		R/W	R	
7	Filter Value	filter				Double	Converted signal value (Outlier detection value)	3.0		R/W	R	
8	Type	TypeID				Int32	Judging method 10001: Simple Threshold Checker	3.0		R/W	R	
9	Determined Value	Judge				Int32	Judgement result 0: Normal 1: Warning 2: Error	3.0		R/W	R	
10	Error Threshold	Error				Array	Range of error threshold Array [0]: Upper limit (Double) Array [1]: Lower limit (Double)	3.0		R/W	R	
11	Warning Threshold	Warning				Array	Range of alarm threshold Array [0]: Upper limit (Double) Array [1]: Lower limit (Double)	3.0		R/W	R	

NOTE

- 1 Multiple assign status "condition" is not stored. "condition" is stored in Equipment Status Change Point History / Equipment Status Change Point History (active).
- 2 The data type becomes variable depending on the signal retrieved.
Variable types: Bool / String / Int32 / Double
- 3 "null" is recorded when machine is disconnected or Collector is stopped.
- 4 "NaN" is recorded when " " (blank) is collected for the custom signal (custom macro variable).

2.2.19 Production Results History

Table96. Production Results History

Entity Name	Logical Name	Production Results History
	Physical Name	ProductResult_History
Definition	- Preserves histories of production results on the basis of equipment name, product name, product serial number, and production period. The sum of the production results is preserved as the accumulated value. The value of production results is calculated from corresponding accumulated production results. - When the production result recorded in the Production Results History (active) (ProductResult_History_Active) changes, the date / time when the change ended and the elapsed time are registered and recorded. - Records the value of multiple assign status (ProductResultNumber / ProductName/ ProductSerialNumber) set in the AdminTool [Equipment Setting] window. - Records the value of difference when ProductResultNumber increased.	

Table97. Definition of Production Results History

2.2.22 Operator History

Table102.Operator History

Entity Name	Logical Name	Operator History
	Physical Name	Operator_History
Definition	- Preserves histories of operator ID on the basis of equipment name and period. Preserves the start time, end time, and the elapsed time when the operator ID changed. - When the operator ID recorded in the Operator History (active) (Operator_History_Active) changes, the time when the change ended and the elapsed time are registered and recorded. - Records the value of multiple assign status (OperatorID) specified on the [Equipment Setting] window of AdminTool.	

Table103.Definition of Operator History

LIST OF ENTITIES FOR INTEGRATION SERVER DB

Table174. List of Entities for Integration Server DB

#	Entity Name	Physical Name	Definition
1	User Setting	user_setting	Manages information and languages required for signing in, and assigns roles to users.
2	Role Setting	role_setting	Assigns authorities to roles for displaying.
3	Facility Master	mt_mstr	Manages information about facilities.
4	Group Master	group_mstr	Manages groups.
5	Equipment Master	equipment_mstr	Manages equipment units.
6	Operational Results	operation_result	Stores status of operational results per equipment.
7	Operational Results (active)	operation_result_opened	Stores status of operational results per equipment. Registers the time when the change started.
8	Operational Results Display Setting	operation_result_setting	Manages operational results display setting.
9	Production Results	productresult_history	Stores production results per equipment.
10	Work Comments History	workcontents_history	Stores work comments per equipment.
11	Operator History	operator_history	Stores operator ID per equipment.
12	Facility ID Master	facilityid_mstr	Manages IDs related to facilities
13	Product Plan Number	productplan_history	Stores production plan for each equipment unit.
14	Alarm History	alarm_history	Manages alarm history information.
15	System Linkage Setting	othersystem_setting	Manages system linkage information.
16	System Linkage Role Setting	role_othersystem	Manages system linkage authority information.
17	System Setting	system_version	Manages system information.
18	LDAP Server Setting	ldap_server_setting	Holds LDAP Server connection and registration information.
19	Calendar Period	user_calendar_span	Manages the calendar period of each function for each user.
20	Facility Layout Arrangement Information Role Setting	role_layout	Manages role setting of facility layout arrangement.
21	Facility Layout Arrangement Setting	facilitylayoutarrangement_setting	Manages facility layout arrangement setting.
22	Facility Synchronization Setting	facilitiesyncro_setting	Manages facility synchronization setting.

9	Deletion Flag	deleteflag			O	Bool	Default: false	1.0		W	R
10	Deletion Date	deletedate				Date	Default: null	1.0		W	R
11	Version	version				Object	Version of Integration Server Refer to " Version Information "	1.0		W	
12	Format Version	formatversion				Int32	Version of function	1.1	R	W	
13	Last Collection Date (NOTE)	lastexportdate				Date		1.7		W	R

NOTE

" Last Collection Date " is set as the date/time when the facility transmitted data to the Integration Server. However, there may be cases when the data transmitted is the data that occurred after this date/time, depending on circumstances. Such data may be set in the following collections.

- Operational Results (active) (operation_result_opened)
- Alarm History (alarm_history)
- Operator History (operator_history)

When extracting the data, the data corresponding to the above can be excluded. If the data is to be excluded, make sure that the data excluded is the data of the above corresponding collections with the date/time (updatedate) later than the "Last Collection Date (lastexportdate)" of "Facility Master."

2.4 STATUS

(1) Status information of each collection is kept in the image of the following:

```
{
Signalname : [Signal Name]
  value: [Signal Value],
  filter: [Converted Signal Value (Score Value)]
  judge: [Result],
}
```

For examples of the stored data, refer to "**3.2 EQUIPMENT SIGNAL CHANGE POINT HISTORY**".

For signal names, refer to the "LIST OF FanucCNC SIGNALS" and "LIST OF FanucRobot SIGNALS" subsections of ""FANUC MT-LINK*i* AdminTool OPERATOR'S MANUAL."

[Simple Threshold Checker] is used as the outlier detection type. Filter Value is set to "null" when filtering is not specified.

Judge is set with the results of the threshold (0: success, 1: alert, 2: failure) specified by outlier detection. Determination Value is set to "null" when outlier detection type is not specified. (Version 2.0 does not support outlier detection.)

The result of the threshold value displays "Warning: w, Error: E" as the result for the items JudgeUpper/JudgeLower, as stated in the "FANUC MT-LINK*i* WebUI OPERATOR'S MANUAL, 3.15.1 Signal History Screen (Transited from Main Menu). "

Outlier detection type: Threshold value of Simple Threshold Checker

Range	Error	Warning
Or more (JudgeUpper)	290.0	200.0
Or less (JudgeLower)	-290.0	-200.0

Example of obtained/stored data (Number of smoothing data: 1)

Date/time	Value	Filter	Judge	TypeID	timespan
2016-11-07T08:24:44.500Z	286.997	286.997	1	10001	0.5
2016-11-07T08:24:45.500Z	288.906	288.906	1	10001	0.5
2016-11-07T08:24:46.000Z	289.868	289.868	1	10001	0.5
2016-11-07T08:24:46.500Z	290.846	290.846	2	10001	0.5

Example of obtained/stored data (Number of smoothing data: 3)

Date/time	Value	Filter	Judge	TypeID	timespan
2016-11-08T08:55:44.500Z	100.0	93.990000	0	10001	0.5
2016-11-08T08:55:45.500Z	100.0	98.129	0	10001	0.5
2016-11-08T08:55:46.000Z	100.0	100.0	0	10001	0.5
2016-11-08T08:55:46.500Z	82.667	94.222333	0	10001	0.5

As shown above, the value changes depending on the parameter specified as the outlier detection type.

Value of the Filter is the average value of the sum of its current Value and the preceding values counting up to the number of smoothing data specified.

2.5 SETTINGS AND RESULTS

- (1) When settings are changed, the changed items are copied to the corresponding result collections if needed.

2.6 DELETION

- (1) An Equipment Setting item, or a Status Setting item under an Equipment Setting item has a Deletion Flag attribute that indicates whether the item is deleted.
- (2) When filtering equipment or signals, a search on monitoring screens will be done only with active candidates, and a search on history screens will be done with all candidates including deleted items.

2.7 EQUIPMENT AND GROUPS

- (1) A Group Setting item has an Equipment Name array of equipment which a group consists of, and the Equipment Setting item has a Group Name attribute of the group which the equipment belongs to.

2.8 VIRTUAL ITEMS

- (1) If the start or the end time to view history information is outranged of the history period, the start or end time will be adjusted to review the maximum history information if needed.
- (2) All the information subject to the language is stored in English, and the information expressed in a non-English language is obtained virtually when language setting is changed from English.

COLLECTION BROWSING

Following is an example showing how to browse the database by using the command prompt.

Connect to the DB

- (1) Launch [Mongo] from the command prompt.
- (2) Browse the stored database. [use MTLINKi]
- (3) For the user authentication, enter Username and Password. [db.auth ("Username", "Password")]
Enter steps (1) to (3) altogether as [Mongo MTLINKi -u Username -p Password] to connect to the DB.

Browse the contents of the Collection (Layout_Setting)

- (4) Example for browsing the number of collections saved. [db.Layout_Setting.count()]
- (5) Example for browsing the collection data. [db.Layout_Setting.find()]

```

C:\FANUC\MT-LINKi\MongoDB\bin>mongo
2017-01-16T10:29:28.580+0900 I CONTROL [main] Hotfix KB2731284 or later update
is not installed, will zero-out data files
MongoDB shell version: 3.2.3
connecting to: test
> use MTLINKi
switched to db MTLINKi
> db.auth("admin2","admin2")
1
> db.Layout_Setting.count()
2
> db.Layout_Setting.find()

```

17	July 28, 2020	uwano	Revised for MT-LINK <i>i</i> version 3.10				Title	FANUC MT-LINK <i>i</i> Database Schema

12	Aug. 01, 2018	ogawa	Revised for MT-LINK <i>i</i> version 3.6									
11	Jan. 12, 2018	ogawa	Revised for MT-LINK <i>i</i> version 3.5				FANUC CORPORATION			Sheet.	128/139	
Ed.	Date	Design	Description									
Date	Dec.25,2015	Desig.	Ogawa	Check		Apprv.	Inoue					

NOTE

When executing [find()] in the command prompt, all the contents may not be shown in the command prompt screen even after scrolling. An example is shown below. It is recommended to store in files when browsing the contents of the DB.

< Use the command prompt to store the file >
Store the data of the DB in a file.
Create a batch file and store it in a file using the redirect.

Example 1:

Create a text file for loading data: dbread.txt

```
db.L1Signal_Pool.find()  
  
it  
  
exit
```

Create a batch file to extract the data: dbread.bat

```
path c:\mongodb\bin  
mongo MTLINKi -u Username -p Password < dbread.txt > dbread.log
```

Browse the loaded data (dbread.log).

```

Example 2:

Output a DB collection (Example: ProductResult_History Collection in MTLINKi database) to a JSON file (mtlinki_ProductResult_History00.json) by using **mongoexport.exe**.

Browse the exported text data (mtlinki_ProductResult_History00.json).

NOTE

With 1.7 million history records, for example, it takes some 20 minutes to output and the size of the output file may exceed 2 gigabytes. Usually, such a large file cannot be browsed with a text editor.

In such a case of a huge amount of data as the example shown above, use two options (/limit and /skip) to divide the output file into smaller files with a size of around 0.1 million records.

```

mongoexport /d MTLINKi /u Username /p Password /c ProductResult_History /o
mongoexport /d MTLINKi /u Username /p Password /c ProductResult_History /o
mtlinki_ProductResult_History01.json /limit 100000 /skip 100000

```

3.1 MANAGEMENT OF PRODUCTION RESULT

Below is an example of loading production results from history data (ProductResult_History) in the DB.

In this example, the production results of Equipment0001 from 2016/2/29 16:49:10.0 are browsed and the information such as the following 2 items can be browsed.

Equipment Name: Equipment0001, Date and Time: 2016/2/29 16:49:27.0, Number of Results: 1

```
{"L1Name":"Equipment0001","_id":{"$oid":"56d3f807e878301da0db915f"},"enddate":{"$date":"2016-02-29T07:49:27.000Z"},
"productname":"SAMPLE2","productresult":1,"productresult_accumulate":2983,"resultflag":true,"timespan":18.0,"update
date":{"$date":"2016-02-29T07:49:09.000Z"}}
```

Equipment Name: Equipment0001, Date and Time: 2016/2/29 16:49:27.0 - 16:49:45.0, Number of Results: 1

```
{"L1Name":"Equipment0001","_id":{"$oid":"56d3f819e878301da0db9831"},"enddate":{"$date":"2016-02-29T07:49:45.000Z"},
,"productname":"SAMPLE2","productresult":1,"productresult_accumulate":2984,"resultflag":true,"timespan":18.0,"update
date":{"$date":"2016-02-29T07:49:27.000Z"}}
```

As shown above, production result can be managed through a time-series management function, Equipment History. In the case of the example above, the computation of Production Result generates one ("1") as the number of production results from 16:49:27 to 16:49:45.0 on 2016/2/29.

Date: "updatedate" is set in GMT offset for the time zone specified on Server PC.

NOTE

- 1 Signal information: Signal information which is not defined in Equipment Setting ([2.2.7.1 Status Setting]) is not stored.
It does not mean that the unsaved data has no value. In the preceding example, if [SigOP_path1] is undefined, the data will be stored without the step of ["SigOP_path1":{...},].
- 2 The information about signal names is described in the "LIST OF FanucCNC SIGNALS" and "LIST OF FanucRobot SIGNALS" subsections of ""FANUC MT-LINK*i* AdminTool OPERATOR'S MANUAL."

Example of the Contents of Simple Assign Status: Automatic Operation/Integration Values of Operating Time in the Machine Setting

COLLECTION REFERENCE FOR INTEGRATION SERVER

Following is an example of how to browse database data by using command prompt.

- (1) Launch [Mongo -port 27020] from command prompt.
- (2) Browse the stored database. [use IntegrationServer]
- (3) For user authentication, enter Username and Password. [db.auth ("Username", "Password")]

That is, use the following command from command prompt:
 Mongo IntegrationServer -u *username* -p *password* -port 27020

4.1 LIST OF EQUIPMENT IN FACILITY

Shown below is an example of reading equipment list by specifying MAC address of a managed facility.

Store the data in a file.
 Create a batch file and store it in a file using the redirect.

Create a text file for loading data: dbread_equipment.txt

```
p=db.mt_mstr.findOne({"macaddress":"AA-BB-CC-DD-EE-FF"},{facilityid:1});
db.equipment_mstr.find({facilityid:p.facilityid});
it
exit
```

17	July 28, 2020	uwano	Revised for MT-LINK <i>i</i> version 3.10					Title	FANUC MT-LINK <i>i</i> Database Schema			
16	Jan. 30, 2020	uwano	Revised for MT-LINK <i>i</i> version 3.9									
15	July 22, 2019	uwano	Revised for MT-LINK <i>i</i> version 3.8									
14	Mar. 29, 2019	ogawa	Revised					Draw	A-40950-00001EN			
13	Jan. 29, 2019	ogawa	Revised for MT-LINK <i>i</i> version 3.7									
12	Aug. 01, 2018	ogawa	Revised for MT-LINK <i>i</i> version 3.6									
11	Jan. 12, 2018	ogawa	Revised for MT-LINK <i>i</i> version 3.5					FANUC CORPORATION			Sheet.	136/139
Ed.	Date	Design	Description									
Date	Dec.25,2015	Desig.	Ogawa	Check		Apprv.	Inoue					

Create a batch file to extract the data: dbread_equipment.bat

```
path c:\mongodb\bin
mongo IntegrationServer -u Username -p Password -port 27020
< dbread_equipment.txt > dbread_equipment.log
```

Browse the output text data (dbread_equipment.log).

4.2 READING OPERATIONAL RESULTS IN FACILITY

Below is an example of reading operational results for a half year by specifying MAC address of a managed facility, equipment name, and equipment status.

Store the data in a file.

Create a batch file and store it in a file using the redirect.

MAC address: AA-BB-CC-DD-EE-FF

Equipment name: Equipment0001

Span of time: from Jan. 1, 2016 00:00:00.0 to Jun. 30, 2016 23:59:00.0

Status: EMERGENCY

Create a text file for loading data: dbread_operationresult.txt

```
p=db.mt_mstr.findOne({"macaddress":"00-0C-29-91-62-79"},{facilityid:1});
db.operation_result.find({ "updatedate": { $gte: ISODate("2016-01-01T00:00:00.000+0000") }, $and:
[ { "updatedate": { $lt: ISODate("2016-07-01T00:00:00.000+0000") }, { $and: [ { "facilityid": p.facilityid },
{ $and: [ { "equipmentname": "Equipment01" }, { $and: [ { "status": "EMERGENCY" } ] } ] } ] } } })
it
exit
```

Create a batch file to extract the data: dbread_operationresult.bat

```
path c:\mongodb\bin
mongo IntegrationServer -u Username -p Password -port 27020
< dbread_operationresult.txt > dbread_operationresult.log
```

Browse the output text data (dbread_operationresult.log).

5

USER AUTHENTICATION

Username and Password for the user authentication can be set on a per-database basis.

Example of browsing the collection

```
mongoexport /u Username /p Password /d MTLINKi /c ProductResult_History /o
mtlinki_ProductResult_History00.json --limit 100000
```

Example of adding the collection

```
mongoimport /u Username /p Password /d MTLINKi /c ProductResult_History /o
mtlinki_ProductResult_History00_P.json
```

6

ROLES AND PRIVILEGES

MT-LINK*i* / Integration Server databases support the following roles which allow applications, such as external tools, to access them.

Roles	Privileges
dbOwner	The database owner can perform any administrative action on the database. This role combines the privileges granted by the readWrite, dbAdmin, and userAdmin roles.
userAdmin	The userAdmin role provides the ability to create and modify roles and users on the current database. It also indirectly provides superuser access to either the database or, if scoped to the admin database, the cluster. Users with this role can grant any user any privilege, including themselves.
readWrite	This role provides all the privileges of the read role plus ability to modify data on all non-system collections and the system.js collection.
hostManager	This role provides the ability to monitor and manage servers.
clusterMonitor	This role provides read-only access to monitoring tools, such as the MongoDB Management Service (MMS) and Ops Manager monitoring agent.

Following are the names of MT-LINK*i* / Integration Server databases:

- MT-LINK*i* database: MTLINKi
- Integration Server database: IntegrationServer

NOTE

It is not guaranteed that any external tool can access those databases.
For the details of roles and privileges, refer to documents about MongoDB or technical information posted on the MongoDB Web site.
